

## Challenge

### Frozen Sun Catchers

Sun catchers made from ice are super easy to make! Spend some time outside gathering natural items to use in your sun catchers. The more colourful the better. Examples: branches, berries, twigs, flowers, buds, leaves. Lay out a plastic lid, paper plate or pie plate to use as the mould for your sun catcher. Fill the mould with water and add your natural elements to the water in any design of your choosing. Lay in a piece of string or ribbon to use to hang your sun catcher. Put in the freezer or leave outside overnight to freeze. Gently remove the ice sun catcher from the mould and hang from a tree branch or window sill.
